---

<ComponentPreview styleName="radix-nova" name="sonner-demo" />

## About

Sonner is built and maintained by [emilkowalski](https://twitter.com/emilkowalski).

## Installation

<CodeTabs>

<TabsList>
  <TabsTrigger value="cli">Command</TabsTrigger>
  <TabsTrigger value="manual">Manual</TabsTrigger>
</TabsList>
<TabsContent value="cli">

<Steps className="mb-0 pt-2">

<Step>Run the following command:</Step>

```bash
npx shadcn@latest add sonner
```

<Step>Add the Toaster component</Step>

```tsx title="app/layout.tsx" {1,9} showLineNumbers
import { Toaster } from "@/components/ui/sonner"

export default function RootLayout({ children }) {
  return (
    <html lang="en">
      <head />
      <body>
        <main>{children}</main>
        <Toaster />
      </body>
    </html>
  )
}
```

</Steps>

</TabsContent>

<TabsContent value="manual">

<Steps className="mb-0 pt-2">
````

<Step>Install the following dependencies:</Step>

```bash
npm install sonner next-themes
```

<Step>Copy and paste the following code into your project.</Step>

<ComponentSource
 name="sonner"
 title="components/ui/sonner.tsx"
 styleName="radix-nova"
/>

<Step>Add the Toaster component</Step>

```tsx showLineNumbers title="app/layout.tsx" {1,8}
import { Toaster } from "@/components/ui/sonner"

export default function RootLayout({ children }) {
 return (
  <html lang="en">
   <head />
   <body>
    <Toaster />
    <main>{children}</main>
   </body>
  </html>
 )
}
```

</Steps>

</TabsContent>

</CodeTabs>

Usage

```tsx
import { toast } from "sonner"
```

```tsx
toast("Event has been created.")
```

Types

<ComponentPreview styleName="radix-nova" name="sonner-types" />

Description

<ComponentPreview styleName="radix-nova" name="sonner-description" />
